

Amendments to the Claims

Please make the following amendments to the Claims:

1. (Currently Amended) An apparatus for managing incremental storage, the apparatus comprising:

a policy management module ~~configured to that~~ sets a storage management policy for storage capacity of an existing incremental backup virtual volume, wherein the existing incremental backup virtual volume ~~is configured to stores~~ incremental storage data from an incremental storage operation of a primary volume and the existing incremental backup virtual volume comprises at least one storage volume of a storage pool;

a storage pool management module ~~configured to that~~ monitors available storage capacity of the existing incremental backup virtual volume and to change the storage capacity of the existing incremental backup virtual volume in response to the storage management policy and the available storage capacity, wherein changing the storage capacity comprises dynamically allocating and de-allocating a storage volume of the storage pool to the existing incremental backup virtual volume in response to the change to the storage capacity; and
an incremental log corresponding to the existing incremental backup virtual volume, wherein the incremental log ~~configured to~~ maps a virtual address of the existing incremental backup virtual volume assigned to the incremental

storage data to a physical storage address of the at least one storage volume of the storage pool.

2. (Original) The apparatus of claim 1, wherein the physical storage address comprises a volume identifier.
3. (Currently Amended) The apparatus of claim 1, wherein the storage pool management module[[is]] further ~~configured to~~ allocates and de-allocates a portion of a storage volume to the existing incremental backup virtual volume.
4. (Currently Amended) The apparatus of claim 1, further comprising a read module ~~configured to~~ that reads data stored in the existing incremental backup virtual volume by way of a data path independent from a data path used to store the incremental storage data.
5. (Previously Presented) The apparatus of claim 1, wherein the storage pool management module allocates and de-allocates storage volumes without user input.
6. (Currently Amended) The apparatus of claim 1, wherein the storage pool management module[[is]] further ~~configured to~~ allocates a second storage volume to the existing incremental backup virtual volume in response to a reduction in available space on a first storage volume.

7. (Previously Presented) The apparatus of claim 1, wherein the storage pool comprises at least one storage volume corresponding to a redundant set of storage devices.
8. (Original) The apparatus of claim 7, wherein the redundant set of storage devices comprises a RAID (Redundant Array of Independent Disks) storage array.
9. (Original) The apparatus of claim 1, wherein the incremental log comprises a lookup table.
10. (Currently Amended) The apparatus of claim 1, wherein the storage pool management module[[is]] further ~~configured to~~ increases the storage capacity in response to the available storage capacity increasing above a first storage capacity threshold and to decrease the storage capacity in response to the available storage capacity decreasing below a second storage capacity threshold.
11. (Currently Amended) The apparatus of claim 10, wherein the storage pool management module[[is]] further ~~configured to de-allocates~~ storage volumes wherein the de-allocated storage volumes are available for allocation to a virtual volume unrelated to the existing incremental backup virtual volume.

12. (Currently Amended) A method for managing incremental storage, the method comprising:

monitoring available storage capacity of an existing incremental backup virtual volume and changing a storage capacity of the of the existing incremental backup virtual volume in response to a storage management policy and the available storage capacity, wherein the existing incremental backup virtual volume ~~is configured to store~~ incremental storage data from an incremental storage operation of a primary volume and the existing incremental backup virtual volume comprises at least one storage volume of a storage pool, the at least one storage volume allocated to the existing incremental backup virtual volume;

dynamically allocating and de-allocating a storage volume of the storage pool to the existing incremental backup virtual volume in response to a change to the storage capacity of the existing incremental backup virtual volume; and

mapping in an incremental log corresponding to the existing incremental backup virtual volume a virtual address of the existing incremental backup virtual volume assigned to the incremental storage data to a physical storage address of the at least one storage volume of the storage pool.

13. (Previously Presented) The method of claim 12, further comprising providing incremental snapshot data of the primary volume in response to a replication operation.

14. (Currently Amended) The method of claim 12, wherein changing a storage capacity of the existing incremental backup virtual volume further comprises alerting a user of a storage over-utilization or under-utilization and changing the storage capacity in response to user input.
15. (Currently Amended) The method of claim 12, further comprising reading data stored in the existing incremental backup virtual volume by way of a data path independent from a data path used to store the incremental storage data.
16. (Currently Amended) A system for managing incremental storage, the system comprising:
- a primary volume;
 - a baseline volume ~~configured to that~~ stores a baseline backup copy of data on the primary volume;
 - a storage pool with at least one storage volume ~~configured to that~~ stores incremental storage data from an incremental storage operation of the primary volume in response to changes in data stored on the primary volume after storing the baseline backup copy on the baseline volume, wherein the storage volume is allocated as an existing incremental backup virtual volume;
 - a policy management module ~~configured to that~~ sets a storage management policy for available storage capacity of the existing incremental backup virtual volume;

a storage pool management module ~~configured to that~~ monitors available storage capacity of the existing incremental backup virtual volume and ~~to changes the~~ storage capacity of the existing incremental backup virtual volume in response to the storage management policy and the available storage capacity, wherein changing the storage capacity comprises dynamically allocating and de-allocating a storage volume of the storage pool to the existing incremental backup virtual volume in response to the change to the storage capacity; and an incremental log corresponding to the existing incremental backup virtual volume, wherein the incremental log ~~configured to~~ maps a virtual address of the existing incremental backup virtual volume assigned to the incremental storage data to a physical storage address of the at least one storage volume of the storage pool.

17. (Currently Amended) The system of claim 16, further comprising a replication module ~~configured to that~~ transmits the incremental data from the primary volume to the existing incremental backup virtual volume.
18. (Previously Presented) The system of claim 17, wherein the incremental data comprises incremental snapshot data of the primary volume.

19. (Currently Amended) The system of claim 16, wherein
- the primary volume comprises a plurality of primary volumes;
 - the existing incremental backup virtual volume comprises an existing incremental backup virtual volume corresponding to each primary volume, each existing incremental backup virtual volume comprising at least one storage volume of the storage pool;
 - the incremental log comprises an incremental log corresponding to each existing incremental backup virtual volume; and
 - the storage pool management module monitors available capacity of each existing incremental backup virtual volume and allocates and de-allocates storage volumes for each existing incremental backup virtual volume from the storage pool.
20. (Currently Amended) The system of claim 16, wherein the storage module[[is]] further ~~configured to~~ allocates and de-allocates a portion of a storage volume to the existing incremental backup virtual volume.
21. (Previously Presented) The system of claim 16, wherein the baseline volume is part of the storage pool.

22. (Previously Presented) The system of claim 16, wherein the policy management module resides in a host.

23. (Cancelled)

24. (Currently Amended) A computer readable storage medium comprising computer readable program code for managing incremental storage, wherein the program code ~~configured to:~~

monitors available storage capacity of an existing incremental backup virtual volume;

changes a storage capacity of the existing incremental backup virtual volume in response to a storage management policy and the available storage capacity, wherein the existing incremental backup virtual volume ~~is configured to~~ stores incremental storage data from an incremental storage operation of a primary volume and the existing incremental backup virtual volume comprises at least one storage volume of a storage pool, the at least one storage volume allocated to the existing incremental backup virtual volume; dynamically allocates and de-allocates a storage volume of the storage pool to the existing incremental backup virtual volume in response to a change to the storage capacity of the existing incremental backup virtual volume; and

maps in an incremental log corresponding to the existing incremental backup virtual volume a virtual address of the existing incremental backup virtual volume assigned to the incremental storage data to a physical storage address of the at least one storage volume of the storage pool.

25. (Currently Amended) The computer readable storage medium of claim 24, wherein the program code[[is]] further-~~configured to~~ provides incremental snapshot data of the primary volume in response to a replication operation.
26. (Previously Presented) The computer readable storage medium of claim 24, further comprising reading data stored in the storage pool by way of a data path independent from a data path used to store incremental data.
27. (Cancelled)
28. (Currently Amended) A method for deploying a computer readable medium for managing incremental storage, the method comprising:
 - determining customer requirements for incremental storage;
 - deploying a storage management program for managing incremental storage, the storage management program comprising
 - monitoring available storage capacity of an existing incremental backup virtual volume and changing a storage capacity of the

of the existing incremental backup virtual volume in response to a storage management policy and the available storage capacity, wherein the existing incremental backup virtual volume ~~is configured to store~~ incremental storage data from an incremental storage operation of a primary volume and the existing incremental backup virtual volume comprises at least one storage volume of a storage pool, the at least one storage volume allocated to the existing incremental backup virtual volume;

dynamically allocating and de-allocating a storage volume of the storage pool to the existing incremental backup virtual volume in response to a change to the storage capacity of the existing incremental backup virtual volume; and

mapping in an incremental log corresponding to the existing incremental backup virtual volume a virtual address of the existing incremental backup virtual volume assigned to the incremental storage data to a physical storage address of the at least one storage volume of the storage pool; and

maintaining the storage management program.
